

Abstract

The present invention is directed to a power tool with a removable power supply unit (32, 132, 232) on the device side for supplying electrical power, with at least one indirectly actuatable switch (14, 114, 214) for switching a drive machine on and off.

It is provided that a decoupling device (58, 158, 258) for decoupling the switch (14, 114, 214) and a switching element (26, 126, 226) that at least indirectly actuates the switch (14, 114, 214) are provided.
